

111-Day Web Development Roadmap (2026)

This roadmap is designed for a complete beginner starting from zero. By the end of 111 days, you should be able to build and deploy full web projects, understand frontend and backend basics, use modern tools, and create a portfolio.

Goal by Day 111

You should be able to:

- Build responsive websites
 - Create frontend apps with React
 - Build backend APIs with Node.js and Express
 - Use databases like MongoDB
 - Use Git and GitHub properly
 - Deploy projects online
 - Create a portfolio and resume
 - Start freelancing, internships, or junior web developer roles
-

Phase 1: Computer Basics + Internet Basics + Setup (Day 1–7)

Day 1

- Understand what web development is
- Learn difference between frontend, backend, and full stack
- Learn how websites work
- Understand browser, server, hosting, domain, database
- Watch beginner videos about web development roadmap in 2026

Day 2

- Install:
 - Google Chrome
 - VS Code
 - Node.js LTS
 - Git
- Create accounts:
 - GitHub
 - LinkedIn
 - Figma
 - Vercel
 - Netlify

Day 3

- Learn VS Code basics
- Learn folders, files, extensions
- Install useful extensions:
- Live Server
- Prettier
- ES7 React Snippets
- Auto Rename Tag
- Tailwind CSS IntelliSense
- GitLens

Day 4

- Learn how internet works
- Understand:
- HTTP and HTTPS
- URL
- IP Address
- DNS
- Browser request and response
- Client vs Server

Day 5

- Learn terminal basics
- Commands:
- cd
- dir / ls
- mkdir
- touch
- rm
- clear
- code .
- Practice creating folders and files from terminal

Day 6

- Learn Git basics
- Understand:
- Repository
- Commit
- Push
- Pull
- Branch
- Create first GitHub repository

Day 7

- Create your first small project:

- Simple HTML page with heading, paragraph, image, and button
 - Push project to GitHub
-

Phase 2: HTML (Day 8–18)

Day 8

- Learn HTML structure
- Learn:
 - html
 - head
 - body
 - title
 - meta tags

Day 9

- Learn headings, paragraphs, bold, italic, line break, comments

Day 10

- Learn links, images, lists, tables

Day 11

- Learn forms:
 - input
 - textarea
 - select
 - radio
 - checkbox
 - button

Day 12

- Learn semantic HTML:
 - header
 - nav
 - section
 - article
 - aside
 - footer

Day 13

- Learn audio, video, iframe, embed maps

Day 14

- Build mini project:
- Personal profile page

Day 15

- Build mini project:
- College admission form

Day 16

- Build mini project:
- Restaurant menu page

Day 17

- Practice HTML interview questions
- Learn HTML best practices

Day 18

- Build complete multi-page website using only HTML
-

Phase 3: CSS (Day 19–35)

Day 19

- Learn CSS syntax
- Learn inline, internal, external CSS

Day 20

- Learn colors, background, border, padding, margin

Day 21

- Learn text styling:
- font-size
- font-family
- font-weight
- line-height
- text-align

Day 22

- Learn width, height, max-width, min-height

Day 23

- Learn display properties:
- block
- inline
- inline-block
- none

Day 24

- Learn position:
- static
- relative
- absolute
- fixed
- sticky

Day 25

- Learn Flexbox deeply

Day 26

- Learn CSS Grid deeply

Day 27

- Learn media queries
- Learn responsive design

Day 28

- Learn transitions, transforms, animations

Day 29

- Learn pseudo classes and pseudo elements

Day 30

- Learn CSS variables and reusable styling

Day 31

- Build responsive landing page

Day 32

- Build responsive portfolio homepage

Day 33

- Clone homepage of a famous website

Day 34

- Learn basic UI/UX principles for web design

Day 35

- Build complete responsive website with HTML + CSS
-

Phase 4: JavaScript Basics (Day 36–55)

Day 36

- Learn what JavaScript is
- Learn how to link JS to HTML

Day 37

- Learn variables, data types, operators

Day 38

- Learn conditions:
 - if
 - else
 - switch

Day 39

- Learn loops:
 - for
 - while
 - do while

Day 40

- Learn functions

Day 41

- Learn arrays

Day 42

- Learn objects

Day 43

- Learn string methods

Day 44

- Learn array methods:
 - map
 - filter
 - reduce
 - find
 - forEach

Day 45

- Learn DOM basics

Day 46

- Learn DOM events

Day 47

- Learn forms validation with JavaScript

Day 48

- Learn localStorage and sessionStorage

Day 49

- Learn ES6:
 - let
 - const
 - arrow functions
 - template literals
 - destructuring
 - spread operator

Day 50

- Learn asynchronous JavaScript:
 - setTimeout
 - callback
 - promise
 - async await

Day 51

- Learn fetch API
- Get data from public API

Day 52

- Build calculator app

Day 53

- Build to-do list app

Day 54

- Build weather app using API

Day 55

- Practice JavaScript interview questions
-

Phase 5: Git, GitHub, and Modern Workflow (Day 56–60)

Day 56

- Learn Git commands deeply:
 - git init
 - git add
 - git commit
 - git push
 - git pull
 - git clone

Day 57

- Learn branches and merging

Day 58

- Learn pull requests
- Learn open source contribution basics

Day 59

- Learn GitHub README writing

- Learn markdown

Day 60

- Create proper GitHub profile with pinned projects
-

Phase 6: React (Day 61–82)

Day 61

- Learn what React is
- Learn component-based architecture

Day 62

- Create React app using Vite

Day 63

- Learn JSX

Day 64

- Learn components and props

Day 65

- Learn state with useState

Day 66

- Learn events in React

Day 67

- Learn conditional rendering

Day 68

- Learn lists and keys

Day 69

- Learn forms in React

Day 70

- Learn useEffect

Day 71

- Learn API fetching in React

Day 72

- Learn React Router

Day 73

- Learn Tailwind CSS with React

Day 74

- Learn reusable UI components

Day 75

- Build counter app

Day 76

- Build notes app

Day 77

- Build movie search app

Day 78

- Build e-commerce frontend UI

Day 79

- Learn Context API

Day 80

- Learn basic state management patterns

Day 81

- Build full frontend project with React

Day 82

- Deploy React project on Vercel
-

Phase 7: Backend Development (Day 83–96)

Day 83

- Learn what backend is
- Learn server basics

Day 84

- Learn Node.js basics

Day 85

- Learn Express.js basics

Day 86

- Learn routes and middleware

Day 87

- Learn request and response

Day 88

- Learn REST API basics

Day 89

- Learn MongoDB basics

Day 90

- Learn CRUD operations

Day 91

- Learn Mongoose

Day 92

- Build simple REST API

Day 93

- Connect frontend with backend

Day 94

- Learn authentication basics:
 - login
 - register
 - JWT

Day 95

- Build full stack to-do app

Day 96

- Deploy backend using Render or Railway
-

Phase 8: Final Projects + Portfolio + Career Preparation (Day 97–111)

Day 97

- Learn how portfolios work

Day 98

- Create your personal portfolio website

Day 99

- Add projects, skills, and contact section

Day 100

- Build Project 1:
 - Portfolio website

Day 101

- Build Project 2:
 - To-do app

Day 102

- Build Project 3:
- Weather app

Day 103

- Build Project 4:
- Blog website

Day 104

- Build Project 5:
- E-commerce frontend

Day 105

- Build Project 6:
- Student management system

Day 106

- Learn resume writing for web developers

Day 107

- Create LinkedIn profile properly

Day 108

- Learn how to apply for internships and jobs

Day 109

- Practice common HR interview questions

Day 110

- Practice frontend and backend interview questions

Day 111

- Review everything
 - Update GitHub
 - Update portfolio
 - Write about your 111-day journey on LinkedIn
 - Start applying for internships, freelance projects, and junior roles
-

Best Technologies to Learn in 2026

- HTML5
 - CSS3
 - JavaScript ES6+
 - Git and GitHub
 - React
 - Tailwind CSS
 - Node.js
 - Express.js
 - MongoDB
 - Vite
 - Vercel
 - Render
 - Figma
-

Best YouTube Channels

- FreeCodeCamp
- Traversy Media
- SuperSimpleDev
- Programming with Mosh
- CodeWithHarry
- GreatStack
- Hitesh Choudhary
- JavaScript Mastery
- Lama Dev

Best Practice Websites

- Frontend Mentor
- LeetCode
- HackerRank
- Codewars
- DevChallenges
- CSSBattle

Best Project Ideas

- Portfolio website
- Weather app
- To-do app
- Expense tracker
- Chat app
- E-commerce site
- Blog app
- Student management system

- Notes app
- Event management system

Important Advice

- Practice every day, even if only for 1–2 hours
- Build projects while learning
- Upload every project to GitHub
- Post progress on LinkedIn regularly
- Focus more on projects than only watching tutorials
- Do not try to learn too many frameworks at once
- Consistency matters more than speed
